Fleet Tracking Solutions

Our comprehensive GPS tracking product selection for fleet tracking applications offers tailored solutions for both the large transportation company and the small GPS tracking business.

Are you thinking about the chance to offer your own GPS tracking service to your customers but you have not the slightest idea on where to start from?

Your transportation company or logistics business would like to purchase a reliable and advanced GPS tracking control center and devices to track your company vehicles with at a reasonable pricing?

FINDMYSTUFF has got the hot for you!

We can grant our customers the highest competence and experience in the field, as well as customized solutions that only the most experienced professionals can provide. FINDMYSTUFF offers customized GPS tracking solutions for people, animals and vehicles.

We are probably one of the few companies in the world to be able to offer a truly unique and complete GPS tracking solution that can be customized to suit the following purposes:

- fleet tracking and monitoring of vehicles
- body-worn and personnel GPS tracking applications
- GPS tracking for pets and animals
- GPS tracking for precious goods, materials and containers.

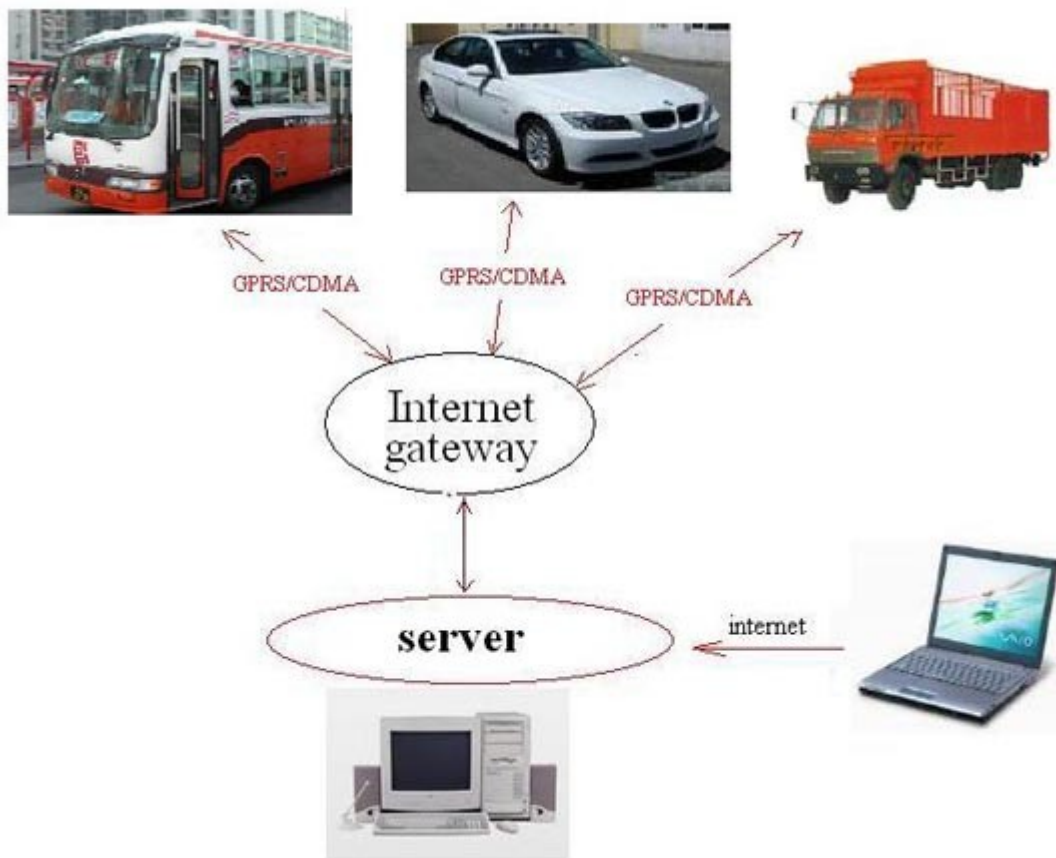

FINDMYSTUFF product offer allows your company to achieve authentic turn-key solutions, from the single GPS tracking devices to the server-based control center to constantly monitor and supervise all the mobile units you need. We can define ourselves as your “one-stop” product and service partner for your OWN complete GPS tracking solution.

Thanks to our extremely competitive price offer (our GPS tracking devices starts at €300 and you will be able to get quantity discounts according to your needs), you will be able to save on your initial purchase and fully absorb system costs in a few years only at the same time adding much more value and security to your company or business.

Most of all, you will be totally independent from third-party service providers, therefore being able to completely supervise and manage *on your own* a truly sensitive and delicate service such as GPS tracking and monitoring for your goods and vehicles is.

The FINDMYSTUFF control center

The FINDMYSTUFF control center is what could be defined as a real central monitoring facility for GPS tracking devices that is fully based on client-server interaction over Internet gateway: fleet management and tracking for vehicles, as well as personnel tracking will be possible. The client-server system architecture will also allow remote access to GPS tracking operations on the FINDMYSTUFF control center to remote users by using any laptop and Internet connection either wired or wireless.

FINDMYSTUFF offers an extremely flexible and scalable system, complete with everything needed ranging from the very single GPS tracking device to the full hardware and software composing the main control center. The typical hardware and software components of a FINDMYSTUFF complete fleet management and tracking solution are:

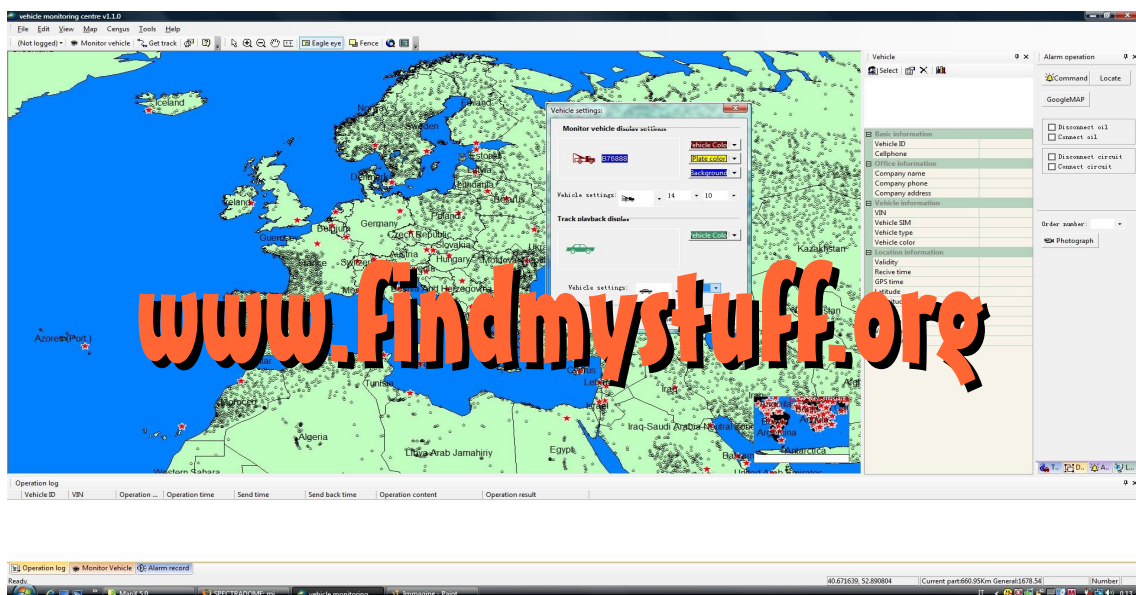

- GPS tracking devices to install on vehicles or for body-worn use on personnel or animals
- a client-server based control center software application suite (proprietary)
- the necessary hardware components for control center
- an Internet connection plus access to Google Maps map database

Once the FINDMYSTUFF control center has been made fully operational, you will be able to instantly monitor GPS position and condition status for all of your vehicles and staff at the same time by the control center directly or remotely via the provided client software.

The FINDMYSTUFF control center allows you to:

1. manage up to 5.000 (yes, five thousand!) GPS tracking devices of various kind, shape and performance (thus allowing both people and vehicle tracking at the same time)
2. confidentially and directly manage the whole GPS tracking process without depending on any third-party service, storing the most interested tracking data on a dedicated database
3. supervise GPS tracking status for each and every GPS tracking device at any times, monitoring and changing the related configuration parameters remotely
4. send and receive text messages (for compatible models only) to and from the GPS tracker and visualize them easily on a special LCD display installed on your dashboard;
5. assign different monitoring privileges to different users, according to your own operational needs
6. talk to your drivers or personnel on the cellphone (only available for those trackers with embedded cellphone feature)
7. set up “off-limits” areas (geofence alarms) and receive a specific alarm if any given area is breached or its perimeter trespassed
8. set up a speed limit parameter that will issue a specific alarm if a vehicle should exceed the previously set speed limit threshold
9. receive SOS alarm notifications from GPS tracking devices directly, at the push of a button
10. surreptitiously listen in to car cockpit/surrounding audio (for compatible models only)
11. install one CCTV camera along with your GPS tracker (only available for a given selected model) and supervise cockpit video in real time (either inside or outside the vehicle, depending on camera position installation). Video pictures from vehicle camera can then be sent to FINDMYSTUFF control center via GPRS or CDMA cellphone network in real time, then subsequently stored into database memory.

Available in English language as a standard, the FINDMYSTUFF control center can also be requested translated in your home country language (surcharges apply).

The FINDMYSTUFF control center allows easy and intuitive management of a remarkable number of vehicles, supervising and making simultaneously available on display a number of additional data for each man or vehicle.

Following is a list of the most important and peculiar customizations allowed by the FINDMYSTUFF control center:

- icon selection according to vehicle type for either online or offline (registered track display) tracking operations
- additional data indication for each single vehicle (color, type, license plate number, SIM used, phone number used, ID, home company, phone number, address, etc.)
- specific GPS tracking data indication for each single vehicle/GPS tracker
- specific GPS signal quality/receiving time/validity and time indication for each single vehicle/GPS tracker along with vehicle status indication
- tracking LOG for each single GPS tracking device monitored, in order to supervise and manage commands for that very specific GPS tracker
- customizable alarm event LOG for each single GPS tracker or vehicle
- track LOG for each single GPS tracker or vehicle
- statistics and census features for all the deployed GPS trackers in operation
- worldwide GPS mapping coverage and quick-and-easy interfacing with Google Maps, no need to install Google Earth
- I/O command sending to remotely operate additional peripherals (for compatible models only)
- voice call and text message interaction (for compatible models only)
- remote image monitoring and capture for each single vehicle: images are received and displayed on the control center main screen, then stored on a database for later use or retrieval (for compatible models only)
- remote audio monitoring from control center (for compatible models only)
- password-protected multiple user remote access to control center via client software
- remote geofence alarm setup and editing from control center is possible for each single GPS tracking device.

The FINDMYSTUFF control center is truly one of the most complete and advanced turn-key solutions for fleet management and multiple GPS tracking purposes available on the worldwide market today.

GPS tracking devices YOUR Findmystuff control center can manage

GPS tracking devices that your FINDMYSTUFF control center can manage are all extremely powerful and versatile equipment that will certainly suit your needs the way you expect.

Need simultaneous tracking of men and vehicles? NO PROBLEM!

Supervise and track them all thanks to our GPS tracking devices and control center: FINDMYSTUFF is your one and only professional GPS tracking solution provider for a totally integrated, reliable and user-friendly fleet tracking system.

You are welcome to choose from the following GPS trackers for your FINDMYSTUFF control center:

T1000

Extremely small and lightweight, very easy to use and suitable for tracking people, animals, goods, cars and vehicles. Powered by ordinary NOKIA cellphone batteries, this tiny tracker can be fully managed by our FINDMYSTUFF control center.

SUPER-T

Cutting-edge wrist watch GPS tracker specifically designed for staff and personnel tracking applications. Allows tactical tracking as well as two-way voice communication in full duplex via cellphone network. This is the only model to allow GPS sub-tracking operation (available upon request). Fully manageable by our FINDMYSTUFF control center.

T- SIMPLE

This is the simplest and cheapest GPS tracking device available from us. It addresses those customers who wish a satellite car alarm that is not only easy to use but can also be managed and supervised without the need of a control center. Also installs on trucks and vans; cannot be managed by our FINDMYSTUFF control center.

T-FLEET

This is our standard device for fleet tracking applications. It can be fully supervised and managed by our FINDMYSTUFF control center, allows GPS tracking as well as car alarm features and cockpit audio monitoring. The T-FLEET is our recommended choice for the average fleet tracking user.

T-VISION

T-VISION is probably our most advanced GPS tracker model for fleet management of vehicles. This model not only incorporates all the standard features of our T-FLEET model but also offers a special CCTV camera for video image surveillance inside vehicle cockpit. The surveillance camera constantly monitors what is going on inside or outside (depending on installation) the vehicle and sends real-time images to the FINDMYSTUFF control center via GPRS or CDMA network, thus allowing the control center not only to remotely monitor images in real time but also to store them locally into database memory for later use.

T-MESSAGE

If you need to keep contact with your drivers and vehicles while tracking them on the road, the T-MESSAGE is probably the right product for you. This is a GPS vehicle tracking system which has been designed to offer the best possible interaction between a vehicle and the FINDMYSTUFF control center. Thanks to the special LCD display provided included, it allows precise GPS tracking, two-way cellphone conversations, interactive SMS text messaging, remote audio monitoring inside vehicle cockpit, SOS panic alarm for preventing robbery and car-jacking assaults. It also features a dedicated I/O interface for external peripherals or alarm systems on vehicle.

T-message offers GPS tracking + interactive text message and telephone conversation with your drivers and vehicles!

FINDMYSTUFF fleet tracking solutions: your best buy in mobile security.
